

QUALITY POLICY

As KALE JET ENGINES, we add value to our country and the world by conducting research, design, development, production, sales, integration, and testing activities for gas turbine engines and systems, leveraging current technology. Additionally, we provide value to our country through post-delivery maintenance and overhaul services, as well as test services encompassing engines and their subsystems. We commit to:

Developing our products and services with a quality approach and delivering them by closely following current technologies,

Meet the needs and expectations of our customers and stakeholders in line with changing and evolving market conditions.

Being innovative and competitive in the sectors in which we operate,

Maintaining a customer satisfaction-focused approach in all our operations,

Continuously enhancing the competencies of our employees through training and other supportive programs,

Complying with all applicable legal and other requirements to which we are bound,

Conducting our activities in alignment with the AS9100 Rev.D Quality Management System Standard and committing to continuous improvement.

Cuneyt KENGER
